

COMPANY-OWNED WIRELINE LOGGING TOOLS -
WHY, WHAT & HOW

T. B. Piper*

SMRI, Chairman - Subcommittee on Drilling, Completion & Logging

July 12, 1983

Abstract

Logs can be run by the operator of a solution-mining/storage facility to provide real-time information to be utilized to facilitate decision-making during drilling or workover and to provide record and routine maintenance logs. All devices are off-the-shelf from several suppliers, and logs and re-runs can be run for wages. A system can be sized for the job at hand. Safety/security from radioactive sources or explosives is adequately provided for by vendors, regulatory agencies and job training.
